

Create Plant Photo Identification Notes

You will use a Daubenmire Frame to count the type of plants in your plot. Create a slide for each of the four plant categories. The finished keynote will be used to identify plants when we go outside. Each slide should show a photo that clearly identifies the plant and include a short written description.

	Number in plot	% cover in plot
Forbs or Herbs		
Trees and Shrubs		
Legumes		
Grasses		
Bare Ground		
Plant Litter (Dead)
